## DETAILED ACTION

### *Claim Objections*

Claim 1 is objected to because of the following informalities: line 8, delete the "." after the phrase separation (a) and insert ",". Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 – 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Yokotani et al. (6,014,023).

As to claims 1 – 6, Yokotani et al. (hereinafter Yokotani) discloses a sensing device comprising sensor elements (3a, 3b) that are sensitive to magnetic fields, the electrical properties of said sensor elements being modifiable according to a magnetic field that can be influenced by a mobile, passive transmitter element (2), wherein the magnetic sensor system (3) has two sensor elements (3a, 3b) in a gradiometer system, each of which is assigned to one of two permanent magnets (21, 22) having a predetermined separation (a), in terms of their dimensions, separation and position relative to the sensor elements (3a, 3b), the permanent magnets (21, 22) are located such that the offset of the output signal of the sensor elements (3a, 3b) in the gradiometer system is minimized (Note fig. 1A, 1B).
